# 3DP – Z-Corporation

## 3D Printing

3DP is our ultimate additive free form technique for visual details. Use 3D Printing when you want to see the final result in full of your 3D part. 3DP is suitable for e.g. architectural models, design products, industry details, FEM analysis models etc.

The technique uses temperature-resistant gypsum composites with good thermal insulating properties to create realistic detail. You can get 3D printed parts in white or in 4-color with 24 bit resolution.

The details can then be selected to be hardened for brighter colors and enhanced durability.

This affordable technology has many possibilities and only your imagination sets the limits. Use 3DP when you need a visual detail of sight.

**Maximum building size:**  
254x381x203mm

**Layer Thickness:**  
0.102 and 0.089 mm
